DVD SERVER

Video on Demand

It costs as much as a year's mortgage, but the Kaleidescape DVD server can rip 160 DVDs (expandable to 440) onto its internal drives and then stream them through player modules anywhere in the house. Multiple movies can be screened simultaneously, and details about each DVD – such as the film's genre, director, and plot synopsis – are automatically provided by the company's online database.

Kaleidescape System: \$27,000 (additional players \$4,000), www.kaleidescape.com
